

# Service

On our service pages we offer help and support for working with BPaaS:

- On the example pages, the **sample processes** used in the documentation are explained in detail.
- You can **download** examples of models and apps in the download area, which is continuously updated. Import the models into your BPaaS account and run the apps there directly.
- The **glossary** provides an overview of frequently used abbreviations and technical terms and explains their meaning.
