

Selecting BPMN Elements

	<p>Click an element on the diagram pane to select it.</p> <p>You can recognize a selected element by the displayed connection points and a thicker frame.</p>
	<p>If you want to select several elements at once, draw a frame with the mouse pointer that encloses all elements to be selected.</p>

Only elements that are completed by the frame are selected.

To add more elements to an existing selection, hold the **Ctrl** key and click on the elements you want to add.

To remove an element from an existing selection, hold the **Ctrl** key and click on the elements you want to deselect.

See page [Working with the BPMN Editor](#) for a list of all available shortcuts and mouse actions on the diagram pane.
