

Resizing BPMN Elements

We will use the **Receive Task** element to showcase how an element's dimensions can be adjusted. The display of the **User Task** element is used for size comparison only.

	Click on the element to be adjusted in order to display its connection points.
	<p>Click on the indicator in the bottom right corner of the element and drag it to the desired location.</p> <p>During the dragging process a line indicates the element's circumference after adjustment.</p>
	Release the mouse key. The element size is enlarged to fit its bottom right corner to the indicated new position.
	You may also decrease an element's size accordingly.
<div>Message Start Event</div>  <div>This is the attribute "Description" of my message start event. I added some line breaks to the text...</div>	<p>The same applies to the size of attributes on the diagram pane.</p> <div> F o r m o r e i n f</div>
