

Group Permissions

In the window, the current permissions for that folder are displayed. If you have **write** permissions, you can add or edit user permissions.

If you want to **add** permissions to a **group of users**, choose **Invite group** option and then enter the name of the group/role, and select **Write** or **Read**.

When you have finished, click on the icon **Add**, and after that click **Save**. This will add new permissions to a selected group/role
