### Process Monitor

Monitor Your Processes

Keep track of your running integration processes.

### User Management

Administrate User Settings

Configure user settings for the platform.

### Log Analyzer

Analyze all Technical Service Logs

Self service tool for creating dashboards, analyzing logs of existing services and API Management metrics.

### Integration (Bridge)

Manage Your Services

Manage your business services.

### File Manager

Manage Your Files

Manage all necessary resources in one place.

### Process Mining

Analyze Your Processes

Dig into problems, find possible causes and optimize your processes.

### Cron Manager

Schedule Your Proc

Administrate, contrn your cron jobs.

<b>Business Modeler</b> Illustrate and Assess Your Business Landscape	<b>BPaaS</b> Digitize Your Processes	<b>API Developer</b> Open Your Endpoints to
 Create and evaluate your business landscape via a graphical user interface.	 Create custom applications based on EPC.	 Grant your customers access to your APIs via a separate interface.
☆	 ☆	
<b>Administration</b> Manage the Platform Components	<b>API Management</b> Manage Your Interfaces	<b>Designer</b> Create Executable Processes
 Use this component to control and display the platform services.	 API Management enables you to apply different policies, enforcing them as runtime rules for each managed API request made.	 Design processes in a graphical format and realize them as an implementation in a code editor.
