

# Defining the Portal Content

The Portal is the starting point for all users of **Scheer PAS**. The content of the portal can be defined by a User Management administrator individually for each user. The user is shown only the tiles for the **Scheer PAS** components for which the administrator assigned him rights. The permissions on some components are also divided into "normal user" rights and extended admin rights. The following table gives an overview on all **Scheer PAS** standard profiles.

 The profile **pas\_base** is mandatory as it grants access to the **Scheer PAS Portal**, the entry into the platform.

Single Sign-on is available throughout all platform components: Log in once, and use all Scheer PAS components that are configured for your user.

## Administrator Profiles

The following list of admin profiles can be searched: Use the available filter fields.

You can only access the User Management if profile **user\_management\_admin** has been assigned at least one user. Therefore, every **Scherer PAS** installation is delivered with one standard user management admin.

-	platform_admin	<ul style="list-style-type: none"> <li>Until version 20.1.8 this profile granted access to the user management.</li> </ul>	-	Deprecate d as of PAS 21.1
