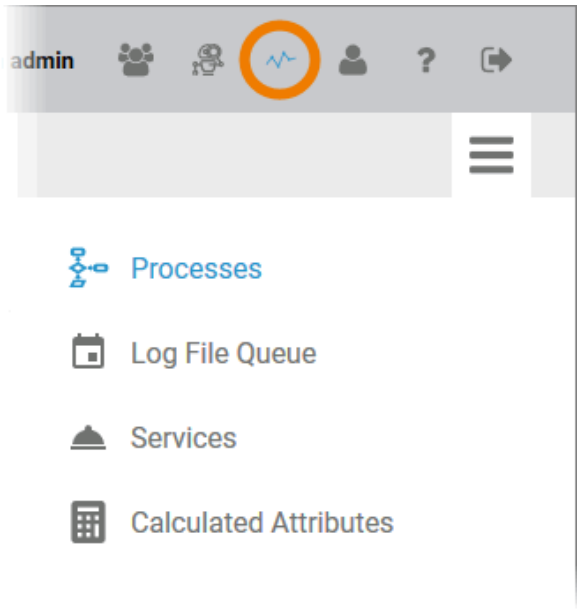
Maintaining Process Mining

This chapter explains how to use the **Scheer PAS** *Administration* to maintain the settings of the PAS component Process Mining.



If you want to open the Process Mining view of your **Scheer PAS** *Administration*, click on the icon in the navigation bar.

The corresponding menu items are displayed in the sidebar:

- Use the **Processes** menu to monitor your processes and set a retention time for the process data.
- The **Log File Queue** menu allows administrators to monitor the log file import from your services. Manual upload of older log files is also possible.
- The **Services** menu provides an overview of all services that deliver data and allows you to manage the collection of logs.
- Open the **Calculated Attributes** menu to create your own calculations.
