Overview of Standard Profiles

Users need appropriate permissions to log in to and work with the platform. Profiles are designed to manage permissions. A user will not be able to work with the platform unless at least one profile has been assigned to his account.

Single Sign-on is available throughout all platform components: Log in once, and use all Scheer PAS components that are configured for your user.

Standard Profiles

The necessary **standard profiles** for your **Scheer PAS** platform are provided with the user management. These standard profiles contain all basic permissions for users of the platform. Every user management already includes one administrator's account with **user_management_admin** profile to enable you to create new users. Every user needs at least one of those standard profiles. Administrators can create new profiles by choosing the sidebar menu **Add Profile**.

> The profile **pas_base** is mandatory as it grants access to the **Scheer PAS** *Portal* , the entry into the platform.

Administrator Profiles

The following list of admin profiles can be searched: Use the available filter fields.

Portal Tile	Profile	Description	Further Information	PAS Version
	**administration_user**	• Grants full access to the platform component administration, all platform services are displayed.	• Administration Guide > Administrating the Platform Components	PAS 21.1
	xuml_container_admin	• Grants limited access to the platform component administration, only customer-specific services are displayed.	• Administration Guide > Administrating the Platform Components	PAS 22.1

	analytics_admin	• Grants access to the Process Mining view in the user management. • Allows to create and manage templates in **Scheer PAS** *Process Mining*.	• Process Mining • Administration Guide > Administrating Process Mining	
 	**api_management_admin**	• Grants additional rights ("superadmin") in API Management UI and API Developer Portal.	• API Management > Administration	PAS 21.1
	**keycloak_user**	• Grants access to the login page of the identity management tool Keycloak.	• Administration Guide > Using Keycloak	PAS 21.1

	**kibana_user**	• Grants access to the Log Analyzer.	• Administration Guide > Using Kibana	PAS 21.1
	**pas_admin_user**	• Grants access to the administration menu in the Designer.	• Designer Administration	PAS 21.1
	**user_management_admin**	• Grants access to the user management.	• Administration Guide > Administrating Users	PAS 21.1

		You can only access the User Management if profile **user_management_admin** has been assigned at least to one user. Therefore, every **ScheerPAS** installation is delivered with one standard user management admin.		
Deprecated Profiles*				

-	**platform_admin**	• Until version 20.1.8 this profile granted access to the user management.	-	Deprecated as of PAS 21.1
-	**rpa_admin**	• Until version 20.1.8 this profile granted access to the RPA view in the user management.	-	Deprecated as of PAS 21.1
* in use until version 20.1.8
