

# Installing the Platform Services

Have a look at the figure below to get a technical overview on the platform services

## Overview on the Installation Process

To install the platform services, you need to go through the following steps:

- 1. Setup the session storage.**  
The session storage keeps track of all active user sessions.  
For a description on how to setup the session storage, refer to [Setting up the Session Storage](#).
- 2. Setup the user database.**  
The user database manages the access to the platform services.  
For a description on how to setup the user database, refer to [Setting up the User Database](#).
- 3. Deploy the platform services.**  
The platform services provide basic functionality such as authorization and service registration.  
For a description on how to setup the platform services, refer to [Deploying the Services](#).
- 4. Configure the platform services.**  
To adapt the platform services to your requirements, you need to configure them.  
For a description on how to configure the platform services, refer to [Configuring the Platform Services](#).
- 5. Start the services.**  
It does not matter in what order you start the services.
