RESTifier for SAP

The RESTifier for SAP is a Node.js service that enables you to access any BAPI RFC function of your SAP system from within any application by using REST calls.

Find below a short video showing the features of the RESTifier.

The RESTifier provides a REST interface. For more information on the REST API refer to REST API of the RESTifier for SAP.

Partners can access a live RESTifier for SAP. If you are a partner, you can get credentials to access the live system from support@e2ebridge.com.
