Replacement Text

The replacement text for find-and-replace operations may contain references to capture-group text from the find. References are of the form `$n`, where `n` is the number of the capture group.

Character	Descriptions
`$n`	The text of capture group n will be substituted for `$n`. n must be >= 0 and not greater than the number of capture groups. An unescaped `$` not followed by a capture group specification is an error. If you want to specify the `$` itself, you need to escape it with backslash like `\$`.
`\`	Treat the following character as a literal, suppressing any special meaning. Backslash escaping in substitution text is only required for '$' and '\', but may be used on any other character without bad effects.
