

normalizeSpaces

Syntax	<pre>set aNormalizedString = aString.normalizeSpaces() set aNormalizedString = normalizeSpaces(LITERAL)</pre>	
Semantics	Removes all leading and trailing spaces and reduces the occurrence of a number of consecutive white spaces (spaces, new lines, carriage returns, and tabs) located between parts of a string to one space. Returns a new string. The state of the current string is not changed.	
Substitutables	aString	Can be any variable or object attribute having the type String .
	LITERAL	String literal.
Examples	<pre>set normalizedString = stringSet.s1.normalizeSpaces();</pre>
