padLeft

Syntax	<pre>set aChangedString = aString.padLeft(character, length)
	set aChangedString = padLeft(LITERAL, character, length)</pre>	

Semantics	The string is padded to the length by adding the character on the left (start) of the string. If the string is already of the required size or larger, the string is returned unchanged.	
Substitutables	`aString`	Can be any variable or object attribute having the type **String**.
	`character`	A single character.
	`length`	Length of final string in characters.
	`LITERAL`	String literal.
Examples	<pre>set changedString = stringSet.s1.padLeft("0", 10);</pre>
