

transliterate

Syntax	<pre>set aTransliteratedString = aString.transliterate (aTransliterationPattern);</pre>	
Semantics	Transliterates a string according to the supplied pattern. The transliteration is implemented by the use of the ICU library. See the ICU User Guide for more information on the transliteration patterns.	
Substitutables	aTransliteratedString, aString	Can be any variable or object attribute having the type String .
	aTransliterationPattern	Can be any variable or object attribute having the type String . The pattern must correspond to the transliteration patterns (see ICU User Guide).
Examples	<p>This example removes all accents from the given string aString.</p> <pre>set aTransliteratedString = aString.transliterate("NFD; [: M:] Remove; NFC;");</pre>
