

unescapeURI

Syntax	<pre>anUnescapedString = aString.unescapeURI(codepage) anUnescapedString = unescapeURI(LITERAL, codepage)</pre>	
Semantics	<p>The string encoded as defined in RFC 2396 is unescaped to a UTF-8 string. The codepage defines the source encoding, e.g. URL parameters in links are in the same encoding as the website (e.g. ISO-8859-1). The return value is a string.</p> <div>Parameters of URLs must be decoded value by value.</div>	
Substitutables	aString	Can be any variable or object attribute having the type String .
	codepage	A string with the name of the target codepage.
	LITERAL	String literal.
Examples	<pre>set unescaped = unescapeURI("M%fc1ler", "iso-8859-1");</pre> <p>The string unescaped will have the value Müller.</p>
