substring

Syntax	<pre>set aSubstring = aString.substring(startIndex, length)
	set aSubstring = substring(LITERAL, startIndex, length)</pre>	

Semantics	Extracts a substring of a given length beginning at position `startIndex`. Returns a new string. The state of the current string is not changed. If length is greater than the length of `aString`, an error is raised.	
Substitutables	`aString`	Can be any variable or object attribute having the type **String**.
	`startIndex, length`	Can be any variable or object attribute having the type **Integer**. The start index cannot be negative.
	`LITERAL`	String literal.

Examples	<pre>set aSubstring = stringSet.s1.substring(0, 2);
	
	// To get the last 5 characters of a string
	set endOfString = astring.substring(aString.length(-5), 5);</pre>
