

# substringBefore

Syntax	<pre>set aSubstring = aString.substringBefore(searchString) set aSubstring = substringBefore(LITERAL, searchString)</pre>	
Semantics	Returns the substring of <code>aString</code> before the first occurrence of <code>searchString</code> . Raises an error if the search string is not found.	
Substitutables	<code>aString</code> , <code>searchString</code>	Can be any variable or object attribute having the type <b>String</b> .
	<code>LITERAL</code>	String literal.
Examples	<pre>set aSubstring = stringSet.s1.substringBefore ("world");</pre>
