

exists

Syntax	<code>aVariable.exists()</code>	
Semantics	Returns true if <code>aVariable</code> is not null, otherwise false. See chapter NULL Values to read more about null values.	
Substitutables	<code>aVariable</code>	Can be a variable or an attribute of an object.
Examples	<pre>set b1 = x.exists(); set b2 = myObject.myAttr.exists();</pre> <p>Assigns the boolean return value of operation <code>exists()</code> to variable <code>b2</code>. Returns true if the attribute <code>myAttr</code> of object <code>myObject</code> is not null.</p>
