

like

Syntax	<pre>aString like "regExpPattern";</pre>	
Semantics	Returns true if <code>regExpPattern</code> matches <code>aString</code> , otherwise false.	
Substitutables	<code>"regExpPattern"</code>	Can be a literal like "abc" or any other regular expression. Regular Expressions provides an overview of regular expression syntax. "regExpPattern" must be enclosed in double quotes. An introduction into regular expressions can be found at http://www.regular-expressions.info/ .
Examples	<p>The example below assigns the boolean result of the relational expression with like operator to variable <code>b1</code>. The expression evaluates to true if the string <code>s1</code> equals "abc".</p> <pre>set b1 = s1 like "abc";</pre>	
	<p>The example below assigns the boolean result of the relational expression with like operator to variable <code>b2</code>. The expression evaluates to true if the string <code>s2</code> contains at least one letter and only lower case letters.</p> <pre>set b2 = s2 like "[a-z]+";</pre>
