

# getErrors

<b>Syntax</b>	<pre>someErrors = getErrors();</pre>	
<b>Semantics</b>	Returns an array with elements of class <b>Error</b> that holds information about the initial cause of the caught error and all of its subsequent errors. The initial error is the first element of this array, subsequent errors follow.	
<b>Substitutables</b>	<code>someErrors</code>	Any array with elements of class <b>Error</b> .
<b>Examples</b>	<pre>set errors = getErrors(); set firstCause = error[0].description;</pre>
