

currentDateTime

Syntax	<pre>aDateTime = currentDateTime();</pre>
Semantics	Returns the current system date (UTC) of the Bridge as base type DateTime. Resolution is down to microseconds. Nevertheless, there is no guaranty of uniqueness. You can get a formatted String representation of the DateTime object using the printDateTimeExpression() Operation.
Examples	<pre>set currentDateTime = currentDateTime();</pre> Figure Creating Base Type Objects in section Creating Objects of Base and Complex Types shows an example using this function.
