

set with Boolean Expressions

Syntax	<pre>set aBoolean = <boolean expression>;</pre>
Semantics	Evaluates <boolean expression> to true or false and assigns the boolean value to <i>aBoolean</i> . Boolean variables can be used in boolean expressions.
Examples	<pre>set b1 = b2 and b3; set b4 = b2 or b3; set b5 = b2 and (b3 or b4); set b6 = not (b2); set b7 = 2 < 1;</pre>
