## **Managing Proxy Entries**

## Viewing the Proxy Entry

For each proxy service that is deployed to an Bridge node instance, a proxy entry will be generated. All users can view the list of all proxy entries.

In the **Node Instances** section of the navigation, click the name of the node instance, where the deployed proxy service runs. Then, click the sub-navigation item with the proxy node name below the navigation item **Proxy Services**.

Tab Proxy Entries is displayed initially.

bridge.scheer-acme.com						
Proxy Entries	Certificate	Configurations	Configuration Template			
Port #1884 (HTTP)						
URI				Destination		
/bridge.scheer-acme.com/Stock_Synchronization/StockSynchronizationService			http://bridge.scheer-acme.com:12023			

The following information about each proxy service entry is displayed:

Port	Port number, to which the proxy service is listening.
Protoc ol	Protocol that is used when sending requests to the proxy service.
URI	URI of the frontend Bridge service, to which the proxy is routing requests.
Destin ation	The Bridge, to which the proxy is routing requests. The port number is the control port of the deployed xUML service on this system.

## Deleting a Proxy Entry

A proxy is defined together with the xUML service in the component diagram. A proxy entry cannot be deleted without deleting the xUML service it is connected to. In order to delete a proxy entry, always delete the xUML service first. The proxy entry then will be deleted automatically.

Depending on the component diagram, it is possible, that the proxy service is running on another node instance than the xUML service. Both node instances must be member of the same domain.

In the example below, the proxy has been defined to run on the dedicated node instance **proxy.scheer**acme.com.

To delete the proxy entry, you need to delete the xUML service **HTTPProxyDedicatedExample**, which has been deployed to node instance **bridge.scheer-acme.com**. Section **Deleting E2E xUML Services** de scribes how to delete a xUML service.

If the proxy entry cannot be deleted for any reason, refer to section Proxies in Troubleshooting.
