

Managing a Bridge Domain

Click the navigation item **Nodes Instances** in the **Domain** section of the navigation. The Bridge displays an overview of all Bridge node instances that are member of the current Bridge domain. New node instances can be imported into the domain. Removing already imported node instances from the domain is possible at any time. It is easy to setup your domain depending on your organizational requirements.

- [Creating a Bridge Domain](#)
- [Importing and Removing Bridge Node Instances](#)
- [Deleting a Bridge Domain](#)

If the Bridge is installed in workstation mode, this navigation item is not visible.

Refer to section [Bridge Domains](#) to learn more about the domain concept of the Bridge.
