Scheer PAS Documentation

Getting Started with PAS

Enter the world of Scheer PAS via our Scheer PAS Portal! This guide explains the Portal's functionalities.

Administration

Explains all components that help admins to run, monitor and manage the platform components and users.

Platform Tools

More about the platform tools such as File Manager, xUML Service Monitor, Keycloak, and Kibana.

API Management

Learn how to manage APIs and API requests using Scheer PAS API Management and the API Developer Portal.

Designer

Explains how to create your own executable micro-services using BPMN and xUML.

Analyzer

Troubleshooting, runtime analysis and regression testing for your xUML services.

Integration (Bridge)

Concepts and usage of the PAS integration component including a guide for the Builder.

Process Mining

How to use Process Mining to analyze your business process data.

Business Modeler

Depict and evaluate your business landscape via a graphical user interface.

Installation Guides

Description of the installation of different PAS components including corresponding troubleshooting pages.

Release Notes

Overview on all PAS versions including their new features and bugfixes.

API Management

Learn how to manage APIs and API requests using Scheer PAS API Management **up to version 23.1.1**.

BPaaS

Find out how to create custom applications based on EPC.

BPaaS Administration

Explains the functionalities of the Scheer PAS Administration application **up to version PAS 20.1.**

BPaaS Entwicklerhandbuch	
	Introduces and explains advanced applications of Scheer PAS BPaaS (**de**).
