

Managing File Resources

Accessing the File Manager

The **Scheer PAS File Manager** enables users of the platform to manage their global resources in one place. This chapter explains how to use the file manager to upload and maintain your resource files. Only users with profile **file_manager_user** are able to use the application.

Note on File Manager Users

- Users with file manager permission have access to all uploaded files.
- The uploaded files are available in all platform applications where an interface for the file manager has been implemented.

If you click on the file manager tile, the application will open within the portal.

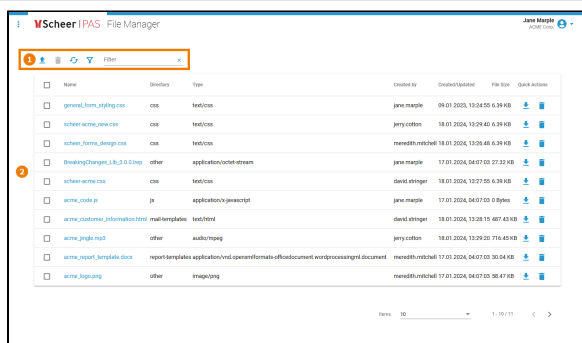

File Managers File Storage Files that are

uploaded in your application sensor via the file manager are saved in the file storage. The file manager is the user in

Overview on the File Manager Page

The file manager page consists of two sections:

1. **Navigation Bar:**
Use the options in the navigation bar to

- upload new file.
- delete selected files.

3. refresh the files' list.

4. open the extended filter options.

- filter the files' list.

2. **File List:**
All available files are displayed in the sortable table.

Go to page [Working With the File Manager](#) for detailed explanation of the navigation bar and file's list options.
