Subform

Element	Icon	
Description	Use the subform element to integrate other existing form pages into the current one. The element thus enables forms to be nested. Use the element's attribute **Form** to choose which of the existing forms you want to include.
Type	n/a
Prepopulation	This element cannot be prepopulated.
Editing	Refer to Modeling Forms for further information regarding editing of form elements using the context menu.

Configuration Options

Use the **Attributes** panel to edit the form element.

Attribute	Description	Allowed Values
Name	Technical identifier for data processing and not visible for the end user.	Alphanumercial characters and underscore. It is not allowed to start the name with a number.
Description	A commentary field for the developer. The content is invisible to users and its sole purpose is internal documentation.	Any string.
Form	A drop-down field to select an existing form to nest. 	Any available form including the overview form of the process.

CSS Class	Enables a field-acurate layout customization.	A valid CSS class.
Custom Attributes	The attribute is used to activate Angular directives, that are created as development kit (devkit) library to expand the default functionality. For detailed information about Angular directives, visit the official Angular documentation. For details about the usage of the **Custom Attributes**, refer to Developing Custom Directives.	• empty attribute • attribute with value (e.g. color="red") • multiple entries separated by space (e.g. color="red" multiline max="5")
Symbol Type	Displays the type of the form element in read-only mode.	–
