

# JSON Type Mapping

JSON types and Bridge types are mapped as follows:

| JSON Type                                      | Example                 | Bridge Type |
|------------------------------------------------|-------------------------|-------------|
| string                                         |                         | String      |
| int                                            |                         | Integer     |
| number                                         |                         | Float       |
| true/false                                     |                         | Boolean     |
| string (base64 encoded)                        |                         | Blob        |
| string ( <a href="#">XML Scheme dateTime</a> ) | 2020-10-10T12:00:00Z    | DateTime    |
| string ( <a href="#">ASP.NET DateTime</a> )    | /Date(1584960102-0700)/ | DateTime    |
| array                                          |                         | Array       |

For more information on base types see [Base Types](#).
