

subblob

Syntax	<pre>set aSubBlob = aBlob.subblob(startIndex, length);</pre>	
Semantics	Extracts a sub-blob of a given length beginning at position startIndex. Returns a new blob. The state of the current blob is not changed. If length is greater than the length of the blob, an error is raised.	
Substitutables	aBlob, aSubBlob	Can be any variable or object attribute having the type Blob .
	startIndex, length	Can be any variable or object attribute having the type Integer .
Examples	<pre>set aSubBlob = aBlob.subblob(0, 2);</pre>
