## **Removing Libraries**

You can remove a used library from a service. You can do this

- via the Asset Drawer
- via the Manage Libraries dialog
- via the context menu in the service panel

theibraryarestillused in the service. In this case the impementation of the service may be come invalid.

You can also remove a library version from the whole Designer namespace instead of removing it from the service only. You can do this in the library administration, refer to Administrating Libraries > Deleting a Library Version.

If you delete a library version in the administration that is still in use, the implementation of all affected services may become invalid.
