

# getAuthService

Static operation.

This operation returns an instance of the authenticator service. You need this to use all other non-static operations on the authenticator service.

## Interfaces

- `getAuthService() : AuthService`

## Parameters

Name	Type	Direction	Description	Allowed Values / Example
	<a href="#">AuthService</a>	return	Returns an instance of the authenticator service related to the current user.	

## Parameter Types

### AuthService

The authenticator service has no public properties. You need to use getter operations to access properties, like e.g. [getServiceAccountToken\(\)](#).
