

# getUUIDFromToken

Non-static operation.

This operation returns the UUID of the provided token. You need a current authenticator service object to call this operation (which you can get using [getAuthService\(\)](#)).

You can use this operation to e.g. read the UUID from a token provided via the headers in an [API implementation](#).

## Parameters

Name	Type	Direction	Description	Allowed Values /Example
token	String	in	Provide a token.	
	String	return	Returns the Keycloak UUID of the provided token.
