

# getSecurityService

 **Static** operation.

This static operation returns an instance of the security service related to the current user. Depending on the context where this operation has been called this may be an actual person or a service user. You need this to use all other non-static operations on the security service.

## Interfaces

- `getSecurityService() : SecurityService`
- `getSecurityService(loadAuthorizationsFromResources : Boolean) : SecurityService`  
This is an internal operation interface you should not use.

## Parameters

Name	Type	Direction	Description	Allowed Values / Example
<code>loadAuthorizationsFromResources</code>	Boolean	in	This is a internal and technical parameter you should not use.	
	<a href="#">Security Service</a>	return	Returns an instance of the security service related to the current user. Depending on the context where this operation has been called this may be an actual person or a service user.	

## Parameter Types

### SecurityService

The security service has no public properties. You need to use getter operations to access properties, like e.g. [getCurrentUserRoles\(\)](#) or [getCurrentUserUUID\(\)](#).
