Analyzer User Guide

ⓘ Please find the documentation of the Analyzer in a new place: Scheer PAS | Analyzer Guide

The **Scheer PAS** *ANALYZER* is a tool to support users of the Bridge with the tasks of

- Runtime Analysis
- Troubleshouting of Distributed Systems
- Regression Testing

With the Trace Analyzer as a part of the Analyzer it is possible to run test cases and to trace through the UML process flow afterwards. This applies to synchronous processes as well as to asynchronous processes.

The Regression Test Tool as part of the Analyzer provides the possibility to build up full test scenarios. By that approach reproducible tests lead to a defined service quality if the service has been changed.
