

Using the Analyzer with Builder Services

Generally, you can use the Analyzer with both, services created with the **Scheer PAS Builder** as well as services created with the **Scheer PAS Designer** - however there are some particularities to consider each.

This chapter describes how to use the Analyzer with the **Scheer PAS Builder**. Switch to [Using the Analyzer with Designer Services](#) for more information on how you can use the Analyzer to trace through xUML services that have been developed with the Designer.
