

Getting Started With API Management

Scheer PAS API Management is a software tool that allows you to manage and publish your APIs, enhance them with policies, control access and collect and analyze metrics.

To get started, you may want to read about:

- [The API Management User Interface](#)
Get to know the structure of the UI of API Management (header, sidebar, content area), and see the difference between the API Management menu items **My...** (for Editing) and **All...** (Viewing only) .
- [The Concepts of API Management](#)
Read an explanation of the API Management data model and its five primary elements: Organizations, Plans, APIs, Clients, and Policies.
- [API Management Best Practices](#)
Best practices that have been proven useful will help you setting up API Management.

Our **Scheer PAS** Academy also contains a useful [step-by-step guide that shows how to manage an API](#).
