

Importing APIs

Instead of [creating an API](#), you can also import an API. There are two different ways to import APIs:

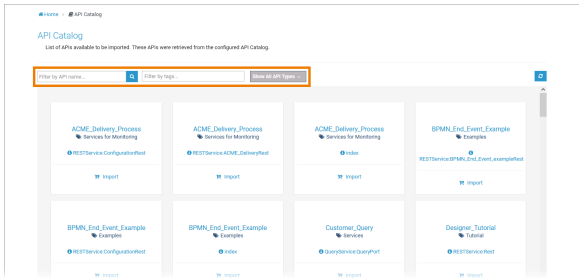

- 1. [Import from API Catalog](#)
- 2. [Import from the organization details page](#)

Import from API Catalog

The catalog is supplied along with API Management. You can find it in the [sidebar menu](#), item **APIs**.

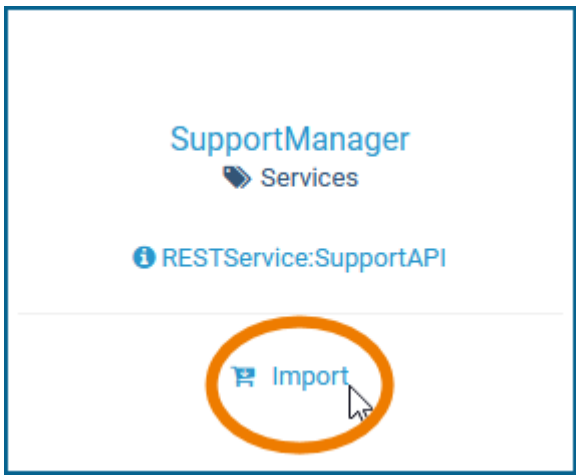

The **API Catalog** lists all SOAP or REST services provided by the **Scheer PAS** integration component.

Three different filter options allow to search the catalog:

- **Text filter:** Filters by API name.
- **Tag filter:** Every service contains a tag corresponding to the category of an xUML service (see [BRIDGE Documentation](#) for further information on frontend components). Use this filter to list all services with the same tag.
- **Type filter:** Displays all REST or all SOAP services.

Search the catalog to find the API you want to use.

Click **Import** on the API tile.

Import API

Organization: ACME Corp. / API Name: SupportManager

Initial Version: 1.0

Description: ACME Support Manager

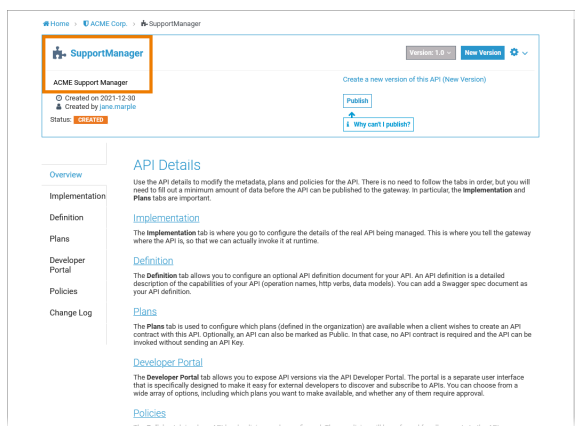

Import **Cancel**

The **Import API** dialog opens.

- Choose the **Organization** you want to import the API to.
- The **API Name** is taken from the catalog, but you can revise it in this field if you want to.
- Insert an **Initial Version** for the API and a **Description**.

Click **Import** to start the API import, or **Cancel** to abort.

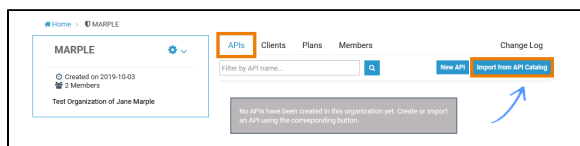

After a successful import, the detail page of the API is displayed and you can directly customize the imported API:

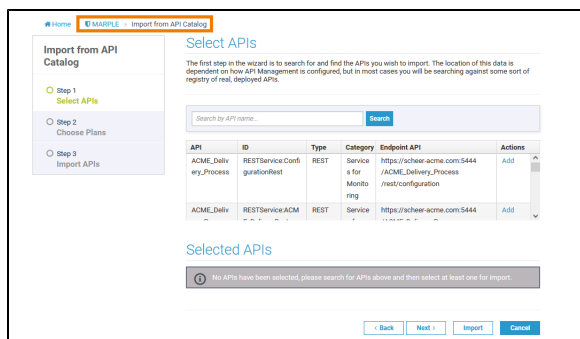

Go to [Finding APIs](#) to learn more about the configuration options of APIs.

Import from Organization Details Page

You can also start an API import from the [organization details page](#). Choose option **Organizations > My Organizations** from the [sidebar menu](#) and open the details page of one of your organizations. If you go to tab **APIs** of the organization, a button **Import from API Catalog** will be displayed on top right:

Page **Import from API Catalog** opens. It enables you to directly import the desired API(s) to the corresponding organization in three steps:

Step 1: Select APIs

In the first step, use the search field to find the API you wish to import and click **Add** to select it. The selected APIs will be listed underneath the search list. Use the link **Remove** if you have added an API by mistake. You can repeat this process as often as you like.

Once you have selected the API or APIs you wish to import, click **Next** to continue:

Select APIs

The first step in the wizard is to search for and find the APIs you wish to import. The location of this data is dependent on how API Management is configured, but in most cases you will be searching against some sort of registry of real, deployed APIs.

API	ID	Type	Category	Endpoint API	Actions
SAP_Fulfillment	SapIdocService/DocPort	SOAP	Interfaces	https://scheer-acme.com:5443/SAP_Fulfillment/SapIdocService/DocPort	Add
SAP_PurchaseOrder	SAPOrderService/SAPOrderPort	SOAP	Interfaces	https://scheer-acme.com:5443/SAP_PurchaseOrder/SAPOrderService/SAPOrderPort	Add

Selected APIs

API	ID	Type	Category	Endpoint API	Actions
ACME_Delivery_Process	RESTServiceConfiguration/rest	REST	Services for Monitoring	https://scheer-acme.com:5444/ACME_Delivery_Process/rest/configuration	Remove

If the **Add** link is missing in column **Actions**, an API with the same name already exists in your organization. In that case, you cannot add this API.

Step 2: Choose Plans

In the second step, choose whether these APIs should be **public** or **private**:

Home

MANIPLE

Import from API Catalog

Import from API Catalog

Step 1

Select APIs

Step 2

Choose Plans

Step 3

Import APIs

Choose Plans

Once you have located the API(s) you wish to import, choose whether these APIs should be public or should be offered through one or more of the plans defined by the organization.

Public API(s)

Select this option if you wish the imported APIs to be accessible directly, without using API contracts. Typically this option is used instead of selecting plans.

☐ Make imported API(s) public

Available Plans

Choose which plans should be presented when clients create a contract to this API. Only plans in a locked state show up in this list.

☒ Test Plan

1.0

Option	Description
Public API(s)	Enable checkbox Make imported API(s) public if you want the imported API(s) to be accessible by any invoker.
Available Plans	<p>Choose the plan or the plans that should be presented to a client who wants to create a contract to this API.</p> <div> <div>✓</div> <div> Plans must be locked to be available in this section. On page Locking a Plan you can find out how to lock plans. Go to Creating a Contract to learn how to create a contract. </div> </div>

Click **Next** to continue.

Step 3: Import APIs

In the last step, you need to confirm that you want to import the selected APIs. Once you click the button **Import**, all selected APIs will be added to the organization:

Home

MANIPLE

Import from API Catalog

Import from API Catalog

Step 1

Select APIs

Step 2

Choose Plans

Step 3

Import APIs

Confirm Import

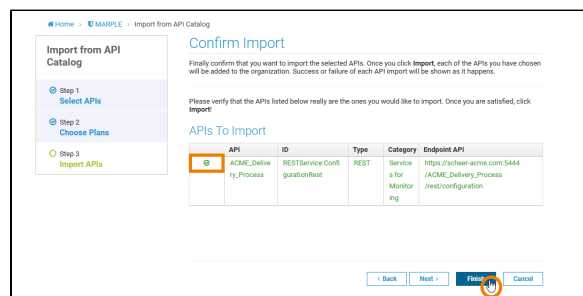

Finally confirm that you want to import the selected APIs. Once you click **Import**, each of the APIs you have chosen will be added to the organization. Success or failure of each API import will be shown as it happens.

Please verify that the APIs listed below really are the ones you would like to import. Once you are satisfied, click **Import**.

APIs To Import

API	ID	Type	Category	Endpoint API
ACME_Delivery_Process	RESTServiceConfiguration/rest	REST	Services for Monitoring	https://scheer-acme.com:5444/ACME_Delivery_Process/rest/configuration

Success or failure of each API import will be shown as it happens. Click **Finish** to complete the import:

You will return to the organization details page, where the imported APIs are listed in tab **APIs**:
