

# JSONP

The **JSONP Policy** turns a standard REST endpoint into a JSONP compatible endpoint.

Policy Type

JSONP Policy

JSONP Policy Configuration

JSONP Policy Configuration

Callback Parameter Name

callback

Parameter name that specifies the callback function.

Add Policy

Cancel

## Configuration Options

Option	Type	Description	Possible Values	Default
Callback Parameter Name	String	Name of the HTTP query parameter that should contain the JSONP callback function name.	-	-

If the API client does not send the JSONP callback function name in the URL (via the configured query parameter name), the policy will do nothing. This allows managed endpoints to support both standard REST **and** JSONP at the same time.
