

Creating Test Cases

Usage of test cases is explained using the educational service build in [Education Lesson 3](#). Refer to [Importing the Service Description](#) for information on how to import the corresponding WSDL.

	To create a test case, select an operation. Open the context menu with the right mouse button and select Create Test Case.
	Enter a name for the new test case and click OK. Default name suggested is the name of the operation.
	The test case will be listed below the operation and has a grey icon . The grey icon indicates that the test case has not been run yet.
