## **Registering a Client**

A client is registered automatically when the user creates a contract for that client in the API Developer Portal (refer to Creating a Contract for a step by step guide).

(j)

Before the client is registered with the runtime gateway, it is not possible to make requests to backend APIs on behalf of that client.

## **Reregistering a Client**

If you changed the client settings, e.g. you added or removed policies, it is necessary to reregister the client to apply the changes. You need to reregister a client when it's status is **Unpublished Changes**. Click the status drop-down to view the available options. If you want to continue to use the client, click **Re register** to apply the changes.

Client of t	DEVELOPMENT / DevClient be ACME development team	<u>n</u>	0 <u> </u>	Cherolister
