Contracts

What is a Contract?

A contract relates a client to an API, using a plan - so a contract is a link between a client and an API through a plan offered by that API. A contract is necessary if a client wants to consume a private API, it cannot be created between a client and a public API. API contracts can only be created between clients and published APIs which are offered through at least one plan.

When a client version is created, the system generates a unique API Key. This key is unique per client version and the same for all contracts of this version. All requests made to the API by a client through the gateway must include this API Key to identify the used client version.

Finding a Contract

All users can create and manage contracts in the API Developer Portal. If you are looking for the contracts that have been created for your clients, go to tab **My Clients** in the API Developer Portal. It shows a list of contracts that you have created for APIs, sorted by clients:

My Clients Groups of APIs	-	SI	jane.marple 🔁 🦨 Logoo	4		
	Home	e Marketplace My Clients				
	9	Clients and APIs				
	E ACME-1.0					
Summary	ACME Order Approval 1.0 - Standard		Published			
Description Use API Policies	https:///com/pasc () https://com/pasc () https://com/pasc () https://com/pasc ()	Rate Limit Srepents per Hear per Client 0/5				

If your user not only has Developer Portal permission but is also allowed to access API Management, you can also view existing contracts in the **Contracts** tab on the clients details page...
