

TIMEOUT

The **Timeout Policy** allows you to determine timeouts for your API. You can differentiate between a timeout for the initial connection and a timeout for the entire request. The timeout set in this policy overrides the global timeout for this specific API.

Configuration Options

Timeout

Basic Configuration

Timeout Connect (ms) *

10000

Defines the timeout for the initial connection between gateway and backend API.

Timeout Read (ms) *

30000

Defines the timeout for the entire request including the time spent waiting for data to be read.
