

Developer Access to APIs

As a developer, you can access API information through the **API Developer Portal**. All available APIs are displayed in the portal (refer to [Managing the Developer Portal](#) for details). Depending on the type of the API, you can directly use it (public APIs) or need to subscribe for it (private APIs).

 The chosen visibility of a public API or a plan for private APIs determines the content of the [API Developer Portal](#) that a user is allowed to see. Relevant for the visibility is the identity management (IDM) group a user belongs to. Refer to [The Concepts of API Management > Visibility](#) for details.
