

REGEX

Various API Management policies allow the usage of regular expressions. Since **Scheer PAS API Management** is written in Java, you need to write regular expressions in policies in java syntax.

Helpful resources to get familiar with the java syntax for regular expressions are:

- [Oracle Java Tutorials > Regular Expressions](#): Tutorial that explains how to use the `java.util.regex` API for pattern matching with regular expressions.
- <https://regex101.com>: An interactive validator for regular expressions.
