Prerequisites

The following elements must be present or installed in order to be able to go through the step-by-step tutorials:

- You need an up-and-running installation of **Scheer PAS** and access to the components **API Management** and **Administration**.
- The **RESTAPI_Echo_Example** must be deployed in the administration component. You can [do unload the repository here](#) to deploy it.

How to Deploy the Example

Deploy the service via the deployment wizard within the PAS Administration.

Administration

Manage the Platform Components

Use this component to control and display the platform services.

To access the deployment wizard, open the **Administration**.

Your user needs the profile **xuml_container_admin** to use the deployment wizard and to manage xUML services in the Administration.

 **YScheer IPAS** Administration

Filter

Use

Service

in the navigation bar to open the deployment wizard.

The wizard opens in a separate pop-up window.

As soon as you have selected the **.rep** file of the service, the wizard guides you through the necessary steps to deploy the xUML service.

In step 2 of the deployment wizard, please adjust the service name so that it matches your user, e.g. restapi-echo-example-stringer.

Refer to [Administration Guide > Working With the Deployment Wizard](#) for detailed step-by-step instructions.
