Tutorial 1 Assign Forms to Process Steps

Properties Name Enter web order Description Enter text Form Search Criteria Trigger Events Form_EnterWebOrder + Add Stereotype Symbol Type	Attributes	×
Name Enter web order Description Enter text Form Search Criteria Trigger Events Form_EnterWebOrder + Add Stereotype Symbol Type User Task	Properties	^
Description Enter text Form Search Criteria Trigger Events Form_EnterWebOrder + Add Stereotype Symbol Type User Task	Name Enter w	veb order
Form Symbol Type User Task	Description Enter to	ext
Trigger Events Form_EnterWebOrder Image: buttonOK.click Image: buttonOK.click + Add Stereotype Image: buttonOK.click Symbol Type User Task	Form Q Sear	ch Criteria
Symbol Type User Task	Trigger Events Form_	EnterWebOrder
Symbol Type User Task 🔹	+ Add Ster	ttonOK.click
	Symbol Type User Ta	sk 🔻

Next, you need to assign a button that triggers the form to continue the process. This is done by adding a trigger event. To do this, click the attribute **Trigger Events** and select buttonOK. click. Good to Know A form can contain several buttons. In case a button is clicked, something should happen. The developer needs to define, what should happen when a button is clicked. Therefore, he has to assign attribute Tr igger Events in the attributes panel: It defines which button of a form associated to the element triggers the default process flow of a BPMN process.

Your process is now ready for a first test.
