

Installation of Software MD18

All software necessary for implementing and running the education examples must be installed first.

1. MagicDraw UML 18.0
2. E2E Builder for MagicDraw (includes E2E Model Compiler and E2E Embedded Runtime)
3. E2E Analyzer (allows to test and analyze services)

Make sure to install MagicDraw before E2E Builder for MagicDraw. We also recommend installing the software according to the suggested default settings on drive **C:**.

Software/Tool	Space on Disk	License Key Required	Installation Guide
MagicDraw UML 18.0	726 MB	Yes	
E2E Builder for MagicDraw	404 MB	No	Installing the E2E Builder
E2E Analyzer	130 MB	No	Analyzer Installation Guide
E2E Bridge Examples	500 MB	No	Unzipping the Builder Examples
Total disk space necessary	ca. 1.760 MB		

Working with MagicDraw and E2E Builder

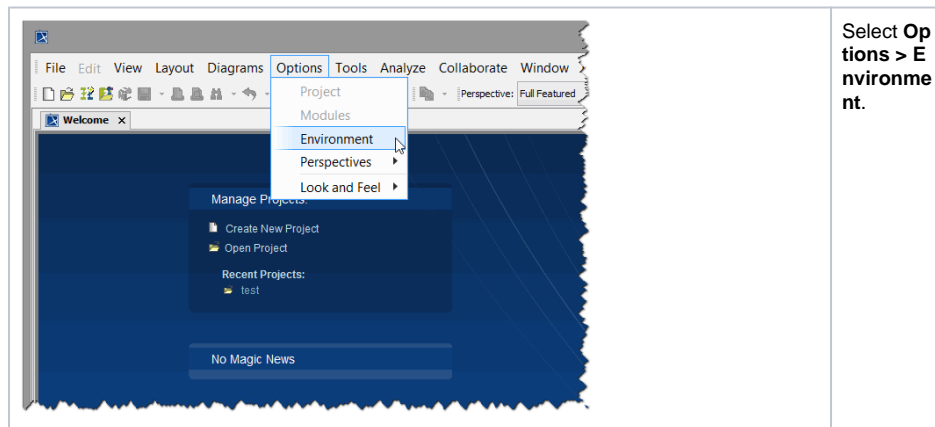

On this Page:

- [MagicDraw UML 18.0](#)
- [E2E Builder for MagicDraw](#)

MagicDraw UML 18.0

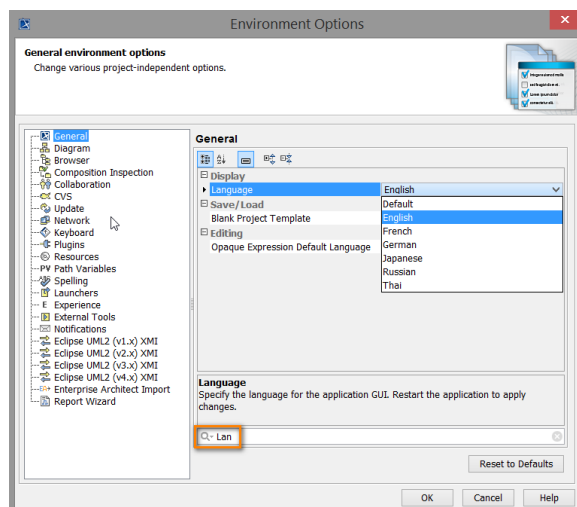

In order to install MagicDraw, follow the instructions of the installation guide. If you open MagicDraw for the first time you have to choose a MagicDraw license file, which you need to order from E2E support (support@e2ebridge.com).

We recommend choosing English in the language setting of MagicDraw, because the education documentation is built with the English version.

Select **Options > Environment**.

In the following dialog, choose **English** as **Language** from the pull-down menu. You can filter the list of options to easier find the **Language** option (see marked area below).

Click **OK**.

E2E Builder for MagicDraw

Before installing the Builder, make sure that MagicDraw is properly installed and can be started successfully.

Then, concerning the E2E Builder:

1. For installing the Builder, refer to the [Builder Installation Guide](#).
2. Apply the **E2E Modeler** perspective to MagicDraw as described in [BUILDER for MagicDraw Basics](#).
