# Test Case Properties Lesson 3 MD18
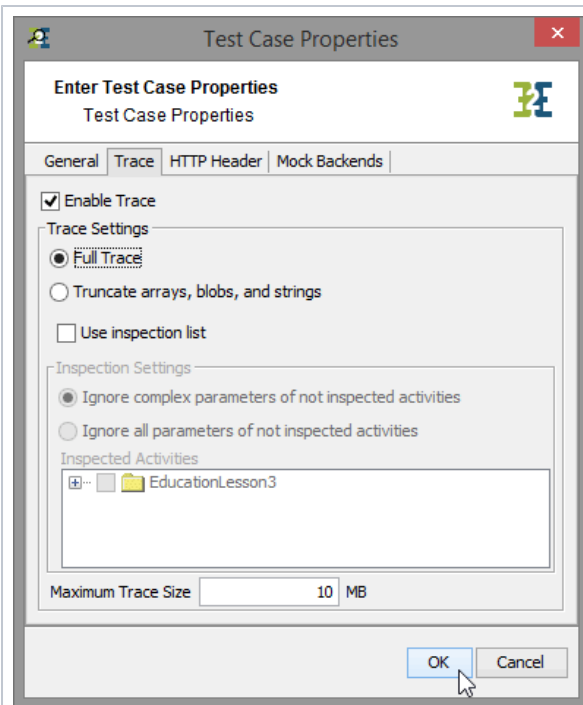

Click the test case **queryProducts**.

Tracing through the Service

In the right panel of the Analyzer window an additional tab **UML** appears, saying "This test case has not been run yet with trace enabled". This is correct as this test case has been created with the E2E SOAP Test Tool which does not support tracing.

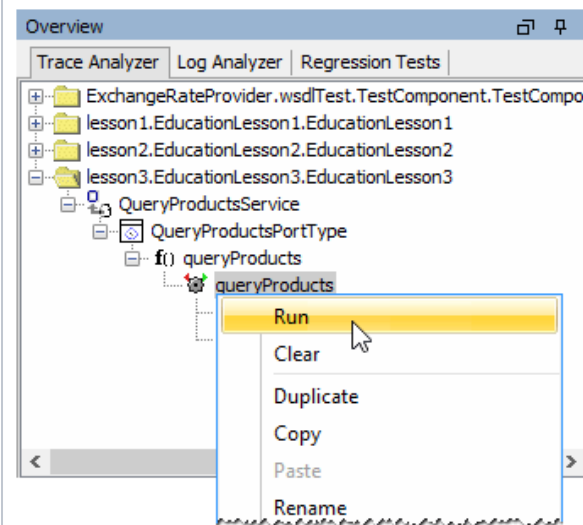

Select **Properties** from the test case's context menu.

Switch to the **Trace** tab, enable trace and check the option **Full Trace**.

Click **OK**.

Run the test case again to collect the trace information.
