

Step 6: Expanding the Process

You will now model the approval process and create the necessary constraint definitions.

Event

Constraint Definition

'Approval.label' === "Yes"

Extend your EPC with an XOR connector and add the two possible events:

- Idea approved
- Idea not approved

Each event contains the **Constraint Definition** field, in which the designer must enter the conditions that are used to decide which process string is to be run through.

The form *Idea Check* contains the radio button *Approval*:

- If the supervisor selects *Yes*, the process string *Idea approved* should be run through.
- If he chooses *No*, the process string *Idea not approved* should be executed.

Step 7: App Execution

Step 7: App Execution

Related Documentation:

- BPaaS
 - Modeling Processes

In order to prevent an EPC from being ineffective always verify **event** and **counter event** when deducing at inconstraints.

Example: A form offers the answers YES and NO. In the process, yes-answers shall follow a different path than non-answers. The

Enter the
correct
constraint
definitions:

- **Idea
approved:** 'A
pprov
al.
label
'
===
"Yes"
- **Idea
not
approved:** 'A
pprov
al.
label
' !
==
"Yes"

Now you have to model the next process step after each event.

Reuse the existing process steps and elements:

- After successful approval, congratulations should be displayed to the employee.
- If the idea is not approved, the employee should be informed by e-mail.
- In the last step, the summary should be displayed regardless of the supervisor's decision.

Content Template Information Mail

Edit - Insert - View - Format - Table - Tools

Dear #Name#,

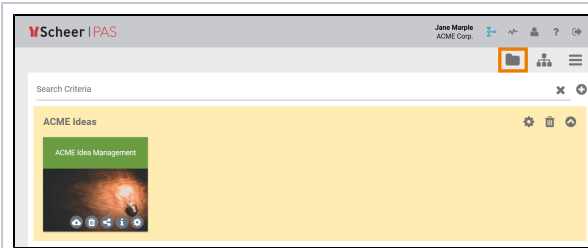

we are sorry to inform you, that your idea has been rejected.

Please don't get discouraged and continue to submit ideas diligently.

Kind regards
Your Management

SAVE CANCEL

Rework the email content so that the employee is informed of the rejection of his idea.

Now your process is ready for execution.

Navigate back to the cockpit and open the **Sidebar New Elements**.
