

# Step 3: Designing Mobile Forms

## Designing a Mobile Form

The mobile form contains a predefined area including the following elements:

- the explanatory text **Main Area**
- the explanatory text **Enter your text here:**
- the input field **Text Element**
- the explanatory text **Fields marked with \* are mandatory**
- the navigation element containing the predefined buttons **Save**, **Cancel** and **Next**

Step 4:  
Configuring the  
Mobile Overview

### On this Page:

- [Designing a Mobile Form](#)
- [Reusing Mobile Forms](#)

### Related Documentation:

- [Mobile](#) (German)
- [BPaaS](#)

At the right side of the workspace you find the **New Elements** sidebar. Use it to drag and drop additional form elements onto the workspace.

General

App-specific

Process App Link (multiple)

Mobile Elements

Camera

Barcode Scanner

Complex

The elements are classified in four categories:

- General
- App-specific
- Mobile Elements
- Complex

Click on the category name to display the associated elements.

Contact Data

Main area

Explanatory Text

Options

Context menu

If you want to delete a form element, right-click on it.

Select option **Delete** in the context menu.

Contact Data

Main area

Input Field

Context menu

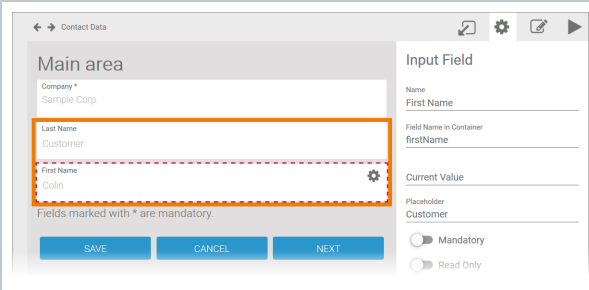

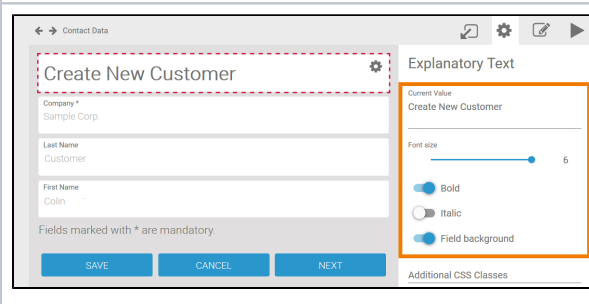

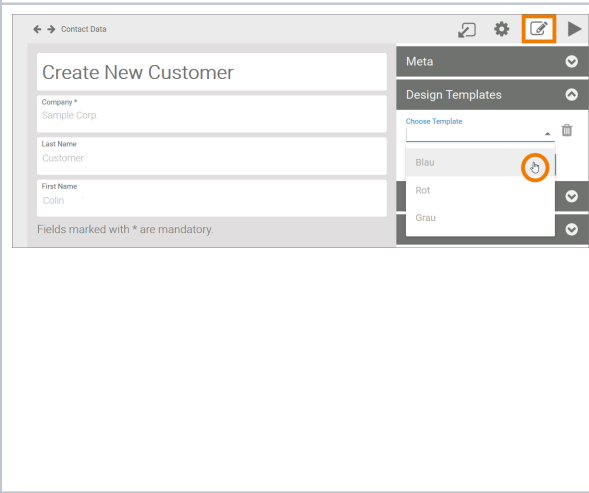

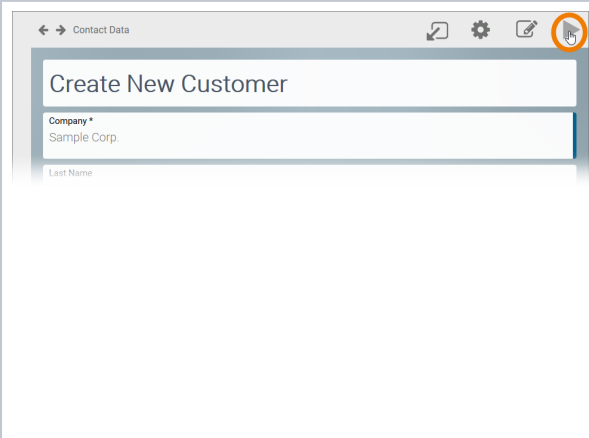

Click on an element to activate it. The active element is marked by a red frame.

#### In the Edit Sidebar

on the right side of the workspace you can then change the settings of the active element, for example rename the element or define additional field properties.

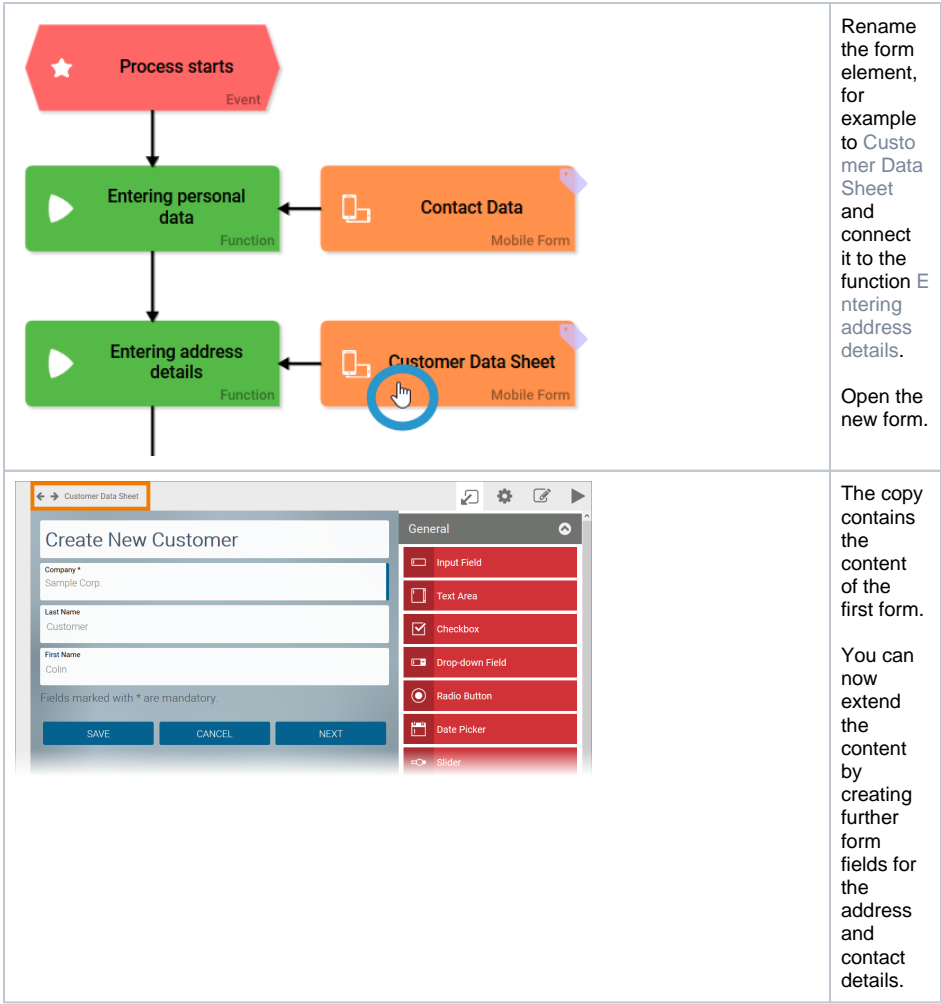

- Rename the existing input field Text Element in Company.
- Change the Field Name in Container to company.
- Enter an appropriate placeholder that is displayed as a sample entry.

	<p>Create two new input fields for first name and last name of the contact.</p>
	<p>Use the existing <b>Explanatory Text</b> element for your own heading and design it in the <b>Edit Sidebar</b>.</p>
	<p>Switch to the sidebar <b>Form Properties</b> and open the category <b>Design Templates</b>.</p> <p>Choose one of the templates.</p>
	<p>Use the <b>Play</b> button to execute your model.</p> <p>If you use the preview function in the Forms Editor, only <b>the current form</b> is displayed.</p>

	<p>The form view is displayed in a pop-up window.</p> <p>The icons at the top of the screen allow you to switch between the different views:</p> <ul style="list-style-type: none"> <li>• <b>Mobile phone</b> (upright)</li> <li>• <b>Mobile phone</b> (landscape)</li> <li>• <b>Tablet</b> (upright)</li> <li>• <b>Tablet</b> (landscape)</li> </ul> <p>Try different views, then close the window.</p>
	<p>If you want to add more fields or rework the layout, you can now make further adjustments in the Forms Editor.</p> <p>When your form is finished, navigate back to the EPC.</p>

## Reusing Mobile Forms

 <p>Reference model</p> <p>Process starts (Event)</p> <p>Entering personal data (Function)</p> <p>Entering address details (Function)</p> <p>Process ends (Event)</p> <p>Contact Data (Form Element)</p> <p>Options</p> <ul style="list-style-type: none"> <li>Create Successor</li> <li>Put to Front</li> <li>Put to Background</li> <li>Copy</li> <li>Cross Reference</li> <li>Delete</li> </ul>	<p>In the next process step, the user shall insert the address details of the customer, but the contact person's details should also be displayed again. Therefore you can reuse the first form <a href="#">Contact Data</a>.</p> <p>Right-click on the form element <a href="#">Contact Data</a> to open the context menu.</p> <p>Select option <b>Co py</b>.</p>
 <p>Options</p> <ul style="list-style-type: none"> <li>New</li> <li>Select All</li> <li>Export Model</li> <li>Import Model</li> <li>Import BPMN Model</li> <li>Generate Model Report</li> <li>Undo</li> <li>Redo</li> <li>Paste <ul style="list-style-type: none"> <li>As Copy</li> <li>Copy with keywording</li> <li>As Link</li> </ul> </li> <li>Paste on Same Position</li> </ul>	<p>Then right-click on the empty workspace and choose the context menu option <b>Paste &gt; As Copy</b>.</p> <p>A copy of the first form is created on the workspace.</p>

Entering an address may take too long for the user on site. Therefore Jane Marple wants to provide the possibility to upload a picture of the customer's business card. This allows the employee to save the data on site and to complete the customer data sheet in the database later.

Open the category **Mobile Elements** and create a camera field.

Define a **Maximum Number of Images** for the element.

Jane then reworks her Customer Data Sheet as follows:

Customer

Company \*  
Sample Corp.

Last Name  
Customer

First Name  
Colin

Business Card

Add image

0/2

Contact Details

Email  
john.doe@example.com

Phone

Mobile

Address Details

Address

StreetNumber

ZipCity

Country  
United States

Fields marked with \* are mandatory.

SAVE

CANCEL

NEXT

- She changes the explanatory text element Create New Customer to Company, Last Name and First Name.
- She adds two other explanatory text elements as title fields: Contact Details and Address Details.

	<ul style="list-style-type: none"><li>• In section Contact Details Jane adds the <b>email element</b> Email and the two <b>phone elements</b> Phone and Mobile.</li><li>• In section Address Details, Jane uses an <b>address element</b> : Address .</li></ul>
	When your form is finished, navigate back to the app project.
